

Instructions for Using REVIVE®

REVIVE will noticeably improve the look and feel of all garments.

For use with hydrocarbon or perchloroethylene systems.

Ensuring Good Results

The most important factor affecting fabric finish performance is the use concentration, or “charge.” The correct concentration results in a noticeable effect. Too low of a concentration produces little to no benefit.

In addition to the charge concentration, extraction efficiency can affect how much fabric finish is left in the clothes. Because basket diameter and extraction speed vary by machine, the amount of solvent and REVIVE retained in the clothes at the end of the cycle will also vary. Therefore, it may be necessary to adjust the concentration to suit the needs of your system.

Determining Your Use Concentration

Install REVIVE at a concentration of one percent (13 ounces per 10 gallons) in the working tank and filter system, then process several loads and evaluate the finished garments. If necessary, adjust the concentration to achieve the desired look and feel. Generally, you will find the ideal concentration between 1 and 1.5 percent.

Knowing When You Have Used Enough

You will know the concentration is correct when the overall look and feel of garments is noticeably improved. In addition, garments will be easier to finish and restore to their “like-new” appearance, and they will clearly be more wrinkle resistant. To prepare a concentration of REVIVE, use the table below to determine how much to add:

Desired Concentration	Rate of REVIVE Addition per 10 Gals. of Solvent
1.0%	13 oz.
1.25%	16 oz.
1.5%	19 oz.

How to Maintain the Concentration

Restore the REVIVE concentration whenever new, distilled or reclaimed solvent is added to the working tank. The frequency of additions is determined by the frequency of solvent transfers to the tank. The amount of additions is determined from the above table based on the desired concentration and amount of solvent transferred

How to Order REVIVE

REVIVE is sold by authorized Street's distributors everywhere. REVIVE is available in single one-gallon containers, cases of four gallons, 5-gallon pails and 15-gallon drums.

Before using any chemical product, review the Safety Data Sheet (SDS) for safe handling and proper disposal.

For professional drycleaning use only.
